time-consuming,  
error-prone tasks

# ABOUT PATROWL

**Founded in 2020**, Patrowl is a leading French provider of offensive security, automated penetration testing, and continuous threat exposure management.

**Patrowl maps (EASM) internet-facing assets** (applications, websites, remote access, cloud environments, etc.).

**Developed by three cybersecurity specialists**, Patrowl is accessible to non-expert users and enables rapid improvements to information system security. The platform primarily serves mid-market companies and large enterprises across all sectors.

**Identifies vulnerabilities** (known, documented, and zero-day) including OWASP threats (PTaaS and CART).

# Patrowl

And **delivers a remediation plan with tools to track the implementation of fixes.**

## ORIGIN STORY

The concept for Patrowl emerged during an e-commerce site audit. Despite a clean security assessment, the site was breached just weeks later. Investigation revealed that a new comment feature added after the audit was the entry point.

This incident proved that traditional security processes can't keep pace with modern digital product development. Infrequent audits limited to a point-in-time snapshot quickly become obsolete. Months later, combining continuous monitoring with large-scale automation gave birth to the Patrowl offensive security solution.

## FOUNDERS

**Nicolas MATTIOCCO** - President, Security Expert  
**Vladimir KOLLA** - CEO, Security Expert  
**Florent MONTEL** - CEO, Security Expert

## AWARDS, RECOGNITION, AND CERTIFICATIONS

**2022** : Patrowl wins the Public Prize at Les Assises de la Cybersécurité.

Patrowl joins Wavestone's promising startups radar and the GouvTech catalog.

**2023** : Patrowl wins both the Jury and Public Innovation Prizes at Les Assises de la Cybersécurité.

**2024** : Patrowl surpasses 700,000 monitored assets and contributes to the 2024 White Paper on vulnerability management, from Campus Cyber.

Patrowl joins the CAIH and RESAH catalogs for health-care institutions.

Patrowl wins the FinTech Innovation Award from La Banque Postale Asset Management.

Patrowl wins the France 2030 i-Nov innovation competition for penetration testing automation.

**2025** : Patrowl wins the Grand Prize for Startup of the Year at Forum InCyber (FIC).

Wavestone's radar adds Patrowl to the scale-up category.

## FUNDING

Patrowl closed its first funding round of €2 million in 2022, and completed a Series A round of €11 million in 2024 led by Crédit Mutuel Innovation, Swen Capital Partners, Bpifrance, and Auriga Cyber Ventures.

## PERSPECTIVES

With ongoing hiring (47 employees to date), Patrowl is rolling out a feature-rich 2025-2026 roadmap built on customer feedback and requirements from clients with whom the company regularly collaborates.

# THE PATROWL SOLUTION

Patrowl is an offensive security solution that performs automated penetration testing and continuous threat exposure management.

**UNIQUE IN THE EUROPEAN MARKET, PATROWL ADDRESSES THREE LEVELS OF CYBER MATURITY:**

## LEVEL 1

Continuous (re)discovery of all internet-facing assets.

## LEVEL 2

Advanced EASM that qualifies and organizes risks based on context and technologies, aligned with the organization's security policy.

## LEVEL 3

Automated and continuous penetration testing that hunts for vulnerabilities capable of compromising systems, data, and reputation.

"We were quickly convinced of Patrowl's value. It addresses two genuine business challenges: it eliminates human error, particularly in configuration, and ensures we only expose what's strictly necessary without overwhelming IT teams with difficult-to-process data." **MGEN**

"With Patrowl, we've gone from penetration tests that consumed enormous amounts of time to clear, verified reports that our engineers can remediate immediately. This saves us time, money, and headaches."

**Xplor**

"The implementation of the SharePoint vulnerability test (CVE 2025-53770) proved fully operational: our Blue Team was immediately alerted. We received the preventive notification about the new Patrowl test at 3:57 pm and by 4:36 pm an alert was triggered."

**Brest Métropole**

**Patrowl requires no configuration time or specialized in-house expertise.** With its accessible interface, Patrowl rapidly improves cybersecurity levels and reduces risk.

Constant change (SCRUM, Agile, DevOps, etc.) and information system transformation (5G, remote work, Cloud, SaaS, Shadow IT) create visibility and control gaps. **Patrowl alerts teams in real time to known vulnerabilities and detected threats**, and uncovers shadow IT and phishing sites impersonating the organization's brand.

# THE PATROWL SOLUTION

"We traditionally conducted penetration tests, but their main drawback is becoming obsolete the day after the report is delivered. Continuous pentesting is an innovative solution perfectly aligned with today's extremely dynamic enterprise IT environment."

**MGEN**

**Patrowl executes manual-quality penetration tests** but extends them across an infinite perimeter and runs them continuously.

"Using the Patrowl platform has greatly improved our monitoring of internet-facing assets. Before integrating it into our operations, we faced constant challenges identifying and prioritizing vulnerabilities in our infrastructure. With Patrowl, we've not only automated this task but gained clear, detailed visibility into our security posture."

**Arkhineo**

**Patrowl delivers hyper-automation of monitoring tasks** that are always time-consuming. Teams can finally focus on remediation and high-value activities.

"We're guided step-by-step on what to do, with precise explanations of triggered alerts, so we can understand what happened and identify which application failed to follow best practices for internet-facing services."

**Avignon Hospital Center,**

Hospital Technologies and Innovations - October 2024

**Patrowl consolidates all vulnerabilities with real business impact**, qualified, prioritized, and contextualized, then provides pragmatic, actionable remediation recommendations.

"Patrowl is already both effective and simple to use. Since we've been using it, the solution delivers highly relevant results."

**Heetch**

**Comprehensive reports on all checks performed with one click**, a consolidated portal for accessing external exposure, prioritized action plans, and all vulnerabilities—Patrowl supports multi-tenant organizations..

## NETWORK AND INFORMATION SECURITY 2 (NIS2)

Patrowl fully complies with NIS 2 requirements for continuous asset penetration testing through Offensive Security as-a-Service.

## DIGITAL OPERATIONAL RESILIENCE ACT (DORA)

Patrowl fully complies with DORA requirements for continuous asset monitoring through Offensive Security as-a-Service.

## RISK INSIGHTS

The Risk Insights feature provides a simplified view focused on the most relevant business or technical use cases (certificates, web applications, emails, exposed non-recommended services, etc.) and addresses accidental risks.

## TRENDING ATTACKS

A continuous radar, the Trending Attacks feature aggregates all vulnerabilities, public exploits, CERT bulletins, and the CISA KEV catalog. Each threat is analyzed by algorithms then validated by experts who qualify it and assess its exploitability.
